Asbestos Management

Rationale

Asbestos is a potentially lethal material often contained in construction materials found in existing school buildings. Due to the potentially hazardous nature of asbestos it needs to be effectively managed.

Policy Statement

Our aim is to provide a school environment safe from the potentially harmful effects of asbestos. Any asbestos contained in existing buildings will be safely managed.

The purpose of this policy is to ensure all risks associated with hazardous building materials within the school are identified and managed.

Definitions

**Asbestos:** Fibrous forms of mineral silicates belonging to the serpentine and amphibole groups of rock-forming minerals.

**Hazard:** Anything with the potential to cause harm, injury, illness or loss.

**Hazardous Building Materials:** Materials, in addition to asbestos, including PCBs, SMFs and lead paint.

**Approved Asbestos Analyst:** A person trained to identify asbestos and complete asbestos fibre counts.

Implementation

- Consult with Health and Safety Representatives (HSR) and employees if this hazard is suspected
- Arrange for a competent person to identify the presence of hazardous building materials in the workplace through a hazardous material audit and provide you with a formal report;
- If asbestos is present at your workplace, the principal appoints a person to act as School Asbestos Co-coordinator within the school and develop an Asbestos Management Plan;
- Inform the OHS Advisory Service (1300 074 715) of the identification of hazardous building materials at the worksite. They will advise you in relation to its handling and removal;
- If reasonably practicable indicate hazardous building materials by labelling;
- Ensure that any contractors or others entering the workplace, who may be exposed to these materials are provided with the formal report outlined above to inform them of the presence and location of the hazardous materials;
- Update the local OHS Risk Register after any works are carried out to control the materials;
- Only use certified contractors to carry out any hazardous building materials removal work; and
- Monitor the condition of the hazardous materials on a regular basis and be sure to update the local OHS Risk Register should there be a change in its condition.
